realistic 90d upside*

*Realistic upside assumes filling one third of your open nights at your current rate — a conservative scenario, not a promise; open nights may include dates you have deliberately blocked. How we scored: everything above comes from your live public listing — the 3-month availability calendar, photo set, title, description and review signals, captured on the date on the cover. Scores weight what guests see first when deciding to click: title and cover photo, then photos, then copy. No third-party estimates are used. Demand signal reflects how much of your next 90 days is already booked — steady bookings mean demand exists and presentation, not location, is the constraint. Where the diagnosis cites your review count, that's the listing's own public review total at capture (a new listing starts at zero even when the host profile has reviews).

What's holding you back

- 1 Description is functionally nonexistent (score 1/10), missing 233-review insights and 4.9 rating validation that could attract 183 additional bookings (64 open nights x £136 = £8720 in lost revenue)
- 2 Garden and parking features aren't properly tagged in amenities section — despite being in title, these high-value amenities aren't explicitly listed to trigger algorithmic visibility
- 3 Current 29.3% occupancy is 39% below cohort median (47.8%) despite 12% price discount — indicates price is insufficient compensation for perception gaps in other areas
