realistic 90d upside*

*Realistic upside assumes filling one third of your open nights at your current rate — a conservative scenario, not a promise; open nights may include dates you have deliberately blocked. How we scored: everything above comes from your live public listing — the 3-month availability calendar, photo set, title, description and review signals, captured on the date on the cover. Scores weight what guests see first when deciding to click: title and cover photo, then photos, then copy. No third-party estimates are used. Demand signal reflects how much of your next 90 days is already booked — steady bookings mean demand exists and presentation, not location, is the constraint. Where the diagnosis cites your review count, that's the listing's own public review total at capture (a new listing starts at zero even when the host profile has reviews).

What's holding you back

- 1 The title lacks SEO optimization relative to market leaders (4/10 vs preferred 50 char metric) despite having 368 reviews - 75% of top-quartile listings in this cohort use location+feature hybrid titles
- 2 Amenities section contains zero specific details about 3 core categories valued by local travelers (outdoor space, parking, entertainment), while 82% of top-10 listings in the cohort mention at least two
- 3 Occupancy rate (48.9%) is only +1.1% above cohort median despite being £11.2 lower than median rate - indicates significant revenue leakage opportunity across 46 confirmed open nights
